

WorkHub v1 – Final Product Requirements Document

Status: Scope Locked | Ready for Development

Home Experience: Kanban Board (Primary Interface)

1. Product Vision

WorkHub is an internal work management platform for MSMEs, combining agile execution, accountability, and corporate discipline without enterprise complexity.

2. Core Principles

User-centric design, calm UX, accountability-first workflows, database-driven configuration, and audit-safe operations.

3. Roles

Admin – system owner and rule controller.

Manager – project oversight and approvals.

Team Lead – sprint execution and timesheet approvals.

HR – employee lifecycle and leave administration.

Employee – task execution and reporting.

4. Authentication & Permissions

Email and password authentication. Rule-based permission engine configurable only by Admin. No hardcoded permissions.

5. Organization & Users

Single organization model. Users are ACTIVE or INACTIVE only. Created by HR or Admin. Same profile structure for all roles.

6. Work Items & Master Data

All work is represented as Work Items with types: Task, Bug, Test Case. All types, priorities, severities, statuses are DB-driven master data configurable via Admin UI.

7. Projects & Sprints

Users can work on multiple projects. Tasks are bound to one project. One active sprint per project with backlog-driven planning and automatic spillover.

8. Kanban Board (Home Page)

Kanban board is the default home experience.

Drag-and-drop supported with role-based and status-based rules.

Board emphasizes focus using visual hierarchy, not dense metadata.

Active sprint context (goal, progress, days left) is shown at top.

Backlog is collapsible and visually separated from execution states.

9. Tasks, Bugs & Test Cases

Work items start in BACKLOG. Owner assigned during sprint planning and is immutable.

Story points mandatory for sprint tasks.

Bugs support severity and environment. Test cases support execution results.

All dropdown values are fetched from DB master data.

10. Comments, Activity & Audit

Comments are for collaboration. Activity is contextual. Audit logs are immutable and system-level.

11. Leave Management (Corporate)

Corporate leave system configurable by Admin/HR.

Leave types, balances, and rules are configurable.

Single-level approval by Manager. Leave is informational only in v1.

12. Timesheets

Daily work logs using task-based start and end time.

Project derived from task automatically.

Supports time-off entries without end time.

Draft up to 5 days or weekly submission.

Approval by Team Lead. HR and Manager have read-only visibility.

13. Reports & Dashboards

Employees see sprint progress only.

Team Leads see burndown and execution metrics.

Managers see cross-project health.

Admins see org-level analytics and audits.

14. Configuration & Constraints

Admin controls permissions and master data.

Core integrity rules are fixed and non-configurable.

15. Out of Scope v1

Calendar UI, payroll, attendance punch-in/out, productivity scoring, integrations.

16. Ready for Development

This document represents the frozen WorkHub v1 scope and is ready for backend and frontend implementation.
